

Internal Multi-Product AI Chatbot Platform

Sample Enterprise Document

Project Information

Project Name: Internal Multi-Product AI Chatbot Platform

Project Type: Enterprise AI Chatbot with RAG Architecture

Technology Stack: Python, PostgreSQL, Qdrant, Groq LLM, Docker, MinIO, FastAPI

Version: 1.0

Status: Development Phase

Academic Information

University: C.V. Raman Global University

Department: Computer Science & Engineering

Project Type: Major Project

Student Details

Student Name: Nishant Roy

Roll Number: 2301020542

Year: B.Tech 3rd Year

Guide: Dr. ABC XYZ (Sample)

Project Objective

Build a centralized AI chatbot platform capable of serving multiple internal enterprise products while maintaining secure product isolation. The platform extracts content from uploaded documents, cleans it using an LLM, converts it into structured Markdown, and prepares it for semantic search using Qdrant.

Modules

1. Authentication & Product Registry
2. Document Upload Pipeline
3. PDF/DOCX/TXT Text Extraction
4. LLM-based Markdown Sanitization
5. Vector Embedding & Qdrant Storage
6. Enterprise Chat Interface

Sample Policies

Leave Policy

Employees receive 12 casual leaves and 10 sick leaves annually.

Work From Home

Employees may work remotely for two days per week with manager approval.

Code of Conduct

Employees must maintain professionalism, confidentiality, and ethical standards.

Testing Information

Test File Types: PDF, DOCX, TXT

Expected Output: Clean Markdown (.md)

LLM Provider: Groq
Vector Database: Qdrant

Conclusion

This document is intended for testing the complete extraction and LLM sanitization pipeline. It contains headings, paragraphs, lists, and structured information that should be preserved in Markdown after processing.
